

Energy Regulation & Compliance

NATURAL GAS & OIL

Van Ness Feldman maintains one of the leading natural gas, oil, and petroleum products practices in the United States. Our clients are involved in almost every aspect of the natural gas, oil, and refined products industries and we provide legal, business, and strategic counseling on all matters arising under core regulatory statutes such as the Natural Gas Act, Natural Gas Policy Act, Pipeline Safety Act, Interstate Commerce Act, and many environmental statutes.

Our nationally recognized Natural Gas Practice offers the resources, knowledge, and depth of experience needed to address complex legal and federal policy questions that often arise in the development of pipeline and storage projects, rate and tariff proceedings, compliance and enforcement matters, energy transactions, pipeline safety matters, and in emerging areas such as Liquefied Natural Gas (LNG) imports and exports, shale gas infrastructure development, regulation of energy derivatives trading, and climate change and green house gas emissions.

We invite you to learn more about our Natural Gas & Oil capabilities:

- Certificates & Project Development
