

ENERGY

The foundation of the firm, Van Ness Feldman's energy practice encompasses matters spanning from renewable energy sources such as solar, biomass, and offshore wind, to traditional energy sources such as natural gas, oil, water, and coal. We serve a broad, national, clientele with interests throughout the continental United States, Alaska, Hawaii, and Canada. Our practitioners combine years of experience in both government service and private practice, with innovative ideas and tested strategies to help clients navigate the complex legal, regulatory, policy, transactional, and litigation issues they face. Clients rely upon the firm to help them attain their goals and business objectives through the early recognition of emerging trends, changes to the regulatory climate, risks, and the opportunities that can lead to successful outcomes.

Sound decisions involving our nation's energy system must balance science, operations, and public policy. Van Ness Feldman understands the critical importance of this intersection in the regulation of energy. Our energy attorneys and policy professionals provide comprehensive counsel to the energy industry—supporting a reliable network of connections across the nation.
